

Blanco Key Deploy

Introducing blanco key deploy

A powerful re-imaging solution that enhances post-erasure provisioning, helping itads and processors transform wiped assets into redeployable devices faster, with less effort and greater value.

Smarter Device Readiness – Re-Imaged. Scalable. Trusted

Unlock the Power of Re-imaging with Blanco

Blanco is evolving beyond data sanitization to deliver complete device readiness.

Blanco Key Deploy empowers processors to extend their capabilities beyond secure erasure by implementing a full re-imaging process. Working in harmony with Blanco's industry-leading erasure tools, Blanco Key Deploy handles everything post-wipe—from OS installation, support for integration with license activation and driver configuration.

Built for ITADs, resellers, and processing partners of all sizes, Blanco Key Deploy helps transition devices from wiped to work-ready with minimal manual effort. The result: greater efficiency, faster turnaround, and full confidence in every redeployed asset.

Key Benefits

- ▶ **End-to-End Solutions**
Key Deploy compliments Blanco's erasure systems to deliver a complete post-wipe provisioning capability. Re-imaging is no longer a separate manual process.
- ▶ **Certified and Configured Erased**
To global standards like NIST 800-88 and ISO 27001, then reimage with the correct OS, license key support, and drivers—all logged and ready for compliance audits.
- ▶ **New Revenue Streams Offer**
Secure erase + Re-image as a bundled service. ITADs and processors can increase ASPs (Average Sell Price) and deliver differentiated value over low-cost competitors.
- ▶ **Speed at Scale**
Re-imaging up to hundreds of devices becomes easy. No manual imaging stations. Just fast, scalable automation.
- ▶ **Trusted and Traceable**
Digitally signed re-imaging logs provide a complete audit trail, from wipe through to configuration and deployment.

Ideal Use Cases

- ▶ ITAD Redeployment Services: Offer full erase-to-image services with licensing and configuration.
- ▶ Retail/Refurbish Trade-In: Prepare resale-ready devices with licensed OS and apps.
- ▶ MSPs and Device-as-a-Service Providers: Deliver zero-touch hardware for internal or client deployment.

How It Works

- ▶ Certified erasure using Blancco Drive Erasure.
- ▶ Asset detection and routing for destination.
- ▶ Blancco Key Deploy applies OS, drivers, and support for integration with license activation.
- ▶ Devices are returned to desk, resale channel, or end-user fully configured and compliant.

BLANCCO KEY DEPLOY = SPEED + TRUST + COMPLIANCE
