

# Blanco Eraser for Apple Devices integrated with Cambrionix ThunderSync5

Automated, high-volume Mac processing with certified erasure

Blanco Eraser for Apple Devices integrated with Cambrionix ThunderSync5 enables high-density, parallel processing of Apple Macs through a controlled, automated workflow. Organizations can erase up to 16 Macs simultaneously while maintaining consistent, compliant, audit-ready outcomes.

## The challenge

- ▶ Manual DFU handling and technician-dependent workflows
- ▶ One-device-at-a-time processing limiting throughput
- ▶ Inconsistent outcomes between operators
- ▶ Scaling that requires additional benches and headcount

## The solution

By combining Cambrionix ThunderSync5-C16 hardware with Blanco's enforced erasure workflows, organizations can scale Mac processing without increasing operational complexity.

- ▶ Erase up to 16 Apple Macs simultaneously (environment dependent)
- ▶ Reduce technician touch time and manual intervention
- ▶ Standardize outcomes across operators
- ▶ Automatically generate Blanco-certified erasure reports

**Request a demo to see high-density Mac erasure in action and compare your current Macs-per-technician-per-hour to this benchmark.**

**Contact us**

## How it works

- ▶ Connect up to 16 Macs to Cambrionix ThunderSync5-C16 hardware
- ▶ Devices enter DFU and are auto-detected
- ▶ Run Erase + Unlock + Reimage (where applicable)
- ▶ Receive certified erasure reports automatically

## Commercial model

Blanco Eraser for Apple Devices continues to be licensed per device. Customers utilize Cambrionix ThunderSync5-C16 hardware to enable high-density processing, with hardware procurement and related licensing managed directly with Cambrionix.

## Who it's for

- ▶ ITADs and high-volume processors
- ▶ Enterprise IT and device lifecycle teams
- ▶ Compliance and quality leaders
