

CASE STUDY: MAMOTH

# Mammoth Expands Secure Device Recycling Across the Northeast

As remote work accelerated, Mammoth saw a sharp increase in both the volume and variety of devices entering the ITAD stream—from laptops and SSDs to mobile phones and tablets.

To keep pace with demand, Mammoth needed a way to standardize device processing, reduce manual effort, and securely manage mobile device erasure in-house while maintaining compliance with customer and industry requirements.

Mammoth standardized its device processing workflows with Blanco's certified data erasure solutions.

By introducing automated, repeatable processes across laptops, SSDs, and mobile devices, the team improved efficiency, increased processing capacity, and strengthened compliance—creating a scalable foundation for continued growth across the Northeast.

## MAMOTH SAW

**50–60**

devices processed simultaneously per technician

**Under 1 minute**

hands-on processing time per device

**Expanded**

capabilities with mobile device erasure handled in-house

**Automated**

workflows for more consistent device processing

**Higher**

throughput without adding operational complexity

**Stronger**

compliance aligned with NIST and IEEE 2883:2022 standards
